

To play your best, you need to play on the best. World Class coatings are:

- Comprised of the highest quality 100% acrylic resins and pigments available
- Attractive, long-lasting, rich, and have vivid in-depth color
- Versatile in offering playing speed from slow to fast
- Proven durable in all environments across the U.S.
- Manufactured with only environmentally-friendly materials
- Reliable over a variety of substrates from concrete to asphalt and cushioned systems

ACRYLIC COATINGS

post tensioned-concrete courts | running tracks | clay courts | play courts | resurfacing | acrylic coatings

Acrylic Surface Maintenance Tips

1. KEEP THE COURTS CLEAN. Remove debris and dirt with a soft-bristled broom, water-broom or leaf-blower.
2. Remove leaves and other organic materials as they will stain the court as they decompose.
3. Water removal can be done with sponge-like rollers, rubber-edged squeegees and air blowers.
4. Do not use metal-edged shovels, scrapers or ice melt to remove snow.
5. Do not directly place tables and chairs on the surface—place plastic and plywood first to prevent dents in the surface.
6. Do not put mechanical equipment on the court as petroleum drips (oil or gas) will break down the surface.
7. Fill cracks with an approved material to prevent further deterioration of the court.
8. Call us if the court has peeling, severe cracking, water-holding areas or slickness— these are problems that require an expert evaluation.
