

RSS-100

The RSS-100 Synthetic Track Surface is a 100% latex polymer-bound track system that offers economical all-weather performance. Each layer of rubber is saturated with the latex binder, allowing each particle to become encapsulated.

The RSS-100 system uses only the highest quality latex binders to provide a durable surface with good longevity.

The RSS-100 Track System consists of:

- 10mm latex-bound rubber, built up in four layers
- Environmentally friendly materials, using water-based binders and recycled rubber
- Economical system - ideal for middle and high school competition
- Excellent resilience
